Resource Guides: Teacher Developed Materials

ABSTRACT

The guide, prepared to supplement the existing curriculum, suggests activities for teachers related to three goals: (1) Self Goal: the student developing an awareness of who he/she is and through effective decision-making what he/she can become: (2) Society Goal: the student becoming aware of the interrelationships of society with his/her school, community, family, work, and leisure; and (3) World of Work Goal: the student becoming aware of the many facets of the world of work. All objectives, the eight student goals, and the activities are coded according to which major goal is emphasized. An outline of the philosophy and concepts of junior high school career education and exploratory work experience is followed by a guide for the integration of career education into any specified course. A major part of the guide consists of 17 mathematics-related units on: transportation; administration and regulatory services; whole numbers and public service jobs (utilities); public utilities; post office; public service and protective service; communications and media: recreation; health; personal services; marine science and oceanography; environment; surveying; business and office; and money, banking, and stock investments. Each unit contains several career related activities, needed resources, and evaluation/outcome. Source lists for audiovisual materials, career and occupational information listed by occupational areas, and locally available field trip sites and quest speakers conclude the guide. (SA)

CAREER EDUCATION PROJECT
STATE FAIR' COMMUNITY COLLEGE
1900 Clarendon Road
'. Sedalia, Mo. 65301

During 1973 and 1974 in five workshops, a group of teachers from three counties (Saline, Pettis, and Benton) in Central Missouri developed these activity guides. Special appreciation is expressed to all those individuals who participated in this program.

This package is only one step in the direction of developing career education curriculum. It has been revised and will continue to be reviewed and tested as an instrument for use as infusion of career education activities in middle or junior high levels of school.

Designated Junior High Participanus

Mr. Phillip Denny, Social Studies Sedalia Junior High School Sedalia, MO 65301

Miss Linda Holerek, Math Sacred Heart School Third and Vermont Sedalia, MO 65301

FOREWARD

This guide has been prepared to supplement the existing curriculum.

The activities presented relate to the three Career Education Goals set up by the workshop participants. They are (1) Self Goal (Self): For the student to develop an awareness of who he/she is and through effective decision-making what he/she can become; (2) Society Goal (Soc): For the student to become aware of the interrelationships of society with his/her school, community, family, work and leisure; (3) World of Work Goal (WW): For the student to become aware of the many facets of the world of work. All objectives, goals and activities included in this guide are coded as to which of the three areas they emphasize.

The activities which follow are offered as suggestions. This guide's purpose is <u>not</u> to tell the individual instructor what he or she must do.

Rather the guide simply offers an example of what the teacher <u>might</u> do. It is hoped that the teacher will use these materials to infuse career education into the existing curriculum. How the instructor does this will depend upon the interests, talents, abilities and ingenuity of the specific teacher, the students and resources available.

Judy Rae Kuhlman Observation/Exploration Specialist Career Education Project State Fair Community College

The activity which is the subject of this report was supported in whole or in part by the U. S. Office of Education, Department of Health, Education, and Welfare. However, the opinions expressed herein do not necessarily reflect the position or policy of the U. S. Office of Education, and no official endorsement by the U. S. Office of Education should be inferred.

CAREER EDUCATION DEFINITION AND DESCRIPTION

There has been a saying used for many years that education is preparation for life. At different points in our nation's history, this point has been overlooked or overshadowed by other interests. It would seem that career education is purposely trying to once again provide this type of education.

career development, which is a lifelong process, begins at a very early age. Even the pre-schooler does role playing. As a child enters formal education, he should continue a step known as the <u>Awareness Stage</u>. This usually covers pre-school through grade six. The second is the <u>Exploration Stage</u>, which covers the middle or junior high level. The third is the <u>Preparation Stage</u>. This covers a time period as long as necessary for the individual to acquire the skills and knowledge needed to enter and progress through his occupational career.

The educational climate today indicates a growing awareness on the part of increasing numbers of people that living in the most advantageous vocational niche is one of the most critical of cultural aspects to man and society. This is the climate that has given impetus to the concept of career development. The great scientific and technical advances in our country have brought about the age of automation-an age in which every person is a specialist. This is true of both the college-educated person and the worker who terminates his education with graduation from high school. Virtually every person, man or woman, college student or not, is involved in earning a living. Education, then, should provide meaningful, significant experiences designed to equip the individual for work in which he will be successful and properly challenged in accordance with his specific aptitudes, interests and total personality. In the case of these individuals who will eventually graduate from college, the function of the school is an interim step. For many others, high school may be the only formal preparation for a lifetime of work and living.

Career education says: Each individual should be led to develop his own work values after becoming fully aware of the alternatives and the impercations, rather than have them dictated.

"Career" itself is a confusing term. To us, it refers to the sum total of all the work done by a person in his lifetime. It differs from an occupation in that an occupation is a component of a career at a point in time.

Career education, then, attempts to help students understand the work ethics imposed by society; develops their work values based on their own personal interests in full awareness of society's demands; helps them become aware of the world of work and its values, prepares for, and ultimately begins and pursues a career, including the possibility of occupational change and the hope for productive use of leisure during that career.

PHILOSOPHY

The interests of the junior high student revolve around the home, school and peer group. Through a study of society, self and the world of work, these students begin to see themselves as an integral part of a working whole. Career education brings relativity to the classroom. Career education seeks to give the student a firm foundation in the basic skills of education—the ability to read, write, communicate and calculate.

CONCEPTS

- 1. Explore and become aware of the many kinds of careers available.
- 2. Realistically appraise career selections according to his present abilities and interests.
- 3. Understand that each person is an individual with different capabilities, needs, interests and values.
- 4. Recognize the value and interdependence of each job choice.
- 5. Realize that work in school is directly related to future job success.
- 6. Realize the satisfaction that should be inherent in job choices and in leisure time pursuits.
- 7. Realize that the cultural and social attitudes of his heritage will not necessarily limit his job choices.
- 8. Realize that the world is in constant change just as his own abilities, interests and expirations change and will therefore explore many occupational possibilities during his maturation process.
- 9. Appreciate the responsibility he has to use his potential to contribute to the work force and to wisely use his leisure time to better the standards of cultural and recreational pursuits of his society.
- 10. Career preparation is not limited to a study for a specific career but necessarily includes all areas of study that broaden his mind and expand reasoning power so that he can make suitable choices in all phases of adult life.

EXPLORATORY WORK EXPERIENCE

Exploratory Work Experience is essentially a career guidance program being offered to seventh, eighth and ninth grade students in the ten participating school districts. It allows the student to observe and to "try out," in a limited way, a variety of conditions of work in one or more professional or vocational fields for the purpose of determining his suitability for such field or fields. Inasmuch as he is not expected to be productive as an employee, he receives no remuneration for participation on the exploratory program. Whatever benefits do accrue to the business in which the student is placed are usually offset by the time expended by his job supervisor (employer) in tear—g and directing activities.

After a tentative career choice has been reached, the motivation to preserve and attain his career goal is enhanced. While involved in exploratory work experience, a participant may arrive at such a tentative career goal through a flexible process of deciding negatively as well as positively about possible careers.

Work exploration is essential to any student who plans to invest a significant amount of time and money in the preparation (continued education) for a career. It is beneficial to all students because most will find themselves at one time or another a part of the world of work, even if the position is part-time or temporary. This <u>real</u> experience can reduce the number of people who learn too late they chose the wrong career.

Such a program was initiated in eight of the ten participating school districts in the summer of 1974 with ninth grade students only. This program will be continued in 1974 and enlarged to incorporate eighth grade students as well as ninth grade students from the participating schools.

STUDENT LEARNING GOALS

Appreciations and Attitudes

Appreciate all forms of human endeavor and work. Understand the impact of work in one's life and resulting need to make a meaningful career choice.

Relate attitudes and awareness to a specific or a related job. Understand the importance of all careers and their contribution to society.

Self Awareness

Choose a career as related to interests and abilities.

Develop self-perception of abilities and interests as related to actual career requirements.

Build reality awareness perception of "where I am compared to where I want to be."

Related personal values and influence of other's values on career choice.

Decision Making

Weigh long and short range effects of different alternatives to specific problems. Apply decision-making process to study of careers. Analyze and refine previous career decisions based on counseling, work experience and all available information.

Select a career for in-depth analysis.

Educational Awareness

Identify and understand values as they relate to lifestyle. Identify present lifestyle and conditions determining that style. Determine a tentative personal schedule to acquire necessary and desired special skills.

Acquire special skills needed for predicted or desired lifestyle.

Career Awareness

Understand the relationships between attitudes and values and cereers.

Economic Awareness

Develop the concept of management of finances (earning, spending, borrowing, savings).

Understand economic potential as related to careers, i.e., relate cost of entering a field to future expected income.

Understand the tools of business: Read and interpret tables, graphs, and charts used as a consumer.

Relate legal and financial consideration to careers in general.

vii

Skill Awareness

Master the use of tools and processes used in research in the physical and social sciences. Understand the use of tools in selected careers. Use basic tools found in careers.

Match necessary skills and processes with selected careers. Match individual abilities and interests with skills and processes needed in careers.

Employability Skills

Understand the social and personal relationship and their effect on employment.

Understand the skills necessary to acquire, maintain, and progress in employment.

Relate personal and social interaction skills to careers. Develop personal and social interaction skills related to in-depth study of one career.

GENERAL GUIDE FOR INTEGRATING CAREER EDUCATION INTO ANY SPECIFIED COURSE

Step i

The teacher decides on the range of careers in each unit, section, or chapter

Step 2

The teacher makes a plan for introducing related careers when appropriate by the following methods:

- (a) student research into careers using reference materials
- (b) student development of occupational clusters
- (c) guest speakers
- (d) field trips
- (e) role playing
- (f) class or group discussions
- (g) written or oral reports

Step 3

The teacher should make a concentrated effort to relate the regular class-room instruction to what is needed to succeed in the working world. To be successful, a student should:

- (a) learn cooperation
- (b) understand own worth as a unique person
- (c) understand the necessary interdependence that exists in groups
- (d) think and reason abstractly and concretely
- (e) form solid analyses
- (f) form opinions and make plans creatively and realistically
- (g) approach problems systematically and realistically
- (h) achieve and experience success in his work
- (i) follow directions closely and accurately
- (j) learn to accept responsibility for himself and his work
- (k) assume the responsibility of developing good attendance habits
- (1) utilize his time effectively
- (m) develop good study habits
- (n) develop within the student an appreciation and understanding of the work ethic—there is dignity in all forms of work

Mathematical Area Index

- I. Whole Number Operations
 - a. Addition
 - b. Subtraction
 - c. Multiplication
 - d. Division
 - e. Expanded notation and exponents

II. Numeration Systems, Bases and Sets

- a. Roman Numeration System
- b. Egyptian Numeration System
- c. Base two, etc.
- d. Sets, subsets, union and intersection

III. Fractions

- a. Prime numbers
- b. Least common multiple
- c. Mixed numerals
- d. The four operations
- e. Ratio
- f. Proportions

IV. Decimals

- a. Conversion from fractions to decimals
- b. Terminating and repeating decimals
- c. Conversion from decimals to fractions
- d. The four operations
- e. Rounding off numbers

V. Percents

- a. Conversion from decimal to percent
- b. Using percents in problem solving
- c. Discounts
- d. Percents of increase and decrease
- e. Interest
- f. Applications

VI. Geometry and Measurement

- a. Points, lines, planes, space
- b. Constructions
- c. Identifications of polygons, prisms, circles, cylinders
- d. Measurement
 - (1) Standard units
 - (2) Metric and English Systems
 - (3) Temperatures
- e. Space figures, surface area, and volume

VII. Integers, Real Numbers and Graphs

- a. Directed numbers
- b. Absolute value
- c. Squares, square roots, cubes, cube roots

BEST COPY AVAILABLE

- d. Scientific notation and exponents
- e. Negative exponents
- f. Operations on real numbers
- g. Graphing Coordinate and Line

WIII. Statistics and Probability

- a. Displaying statistical material on tables and graphs
- b. Frequency, measures of central tendency
- c. Deviations from the mean
- d. Events (simple, compound, intersection, union)

Career Education Objectives

- Self 1. The student will recognize that learning is a continuous process occurring in and outside of school.
 - a. The student will evaluate his level of proficiency in basic mathematical learnings.
 - b. The student will select courses which will increase his proficiency in basic mathematical learnings.
- WW 2. The student will recognize the significance of mathematical language, computational and reasoning development and the mastery of content knowledge as a means of achieving career goals.
 - a. The student will understand the variety of mathematically related occupations found in the world of work.
 - b. The student will compare and contrast the basic-education requirements of several career areas.
 - c. The student will determine the mathematical skills needed for a variety of occupations.
- Self 3. The student will assess his self-characteristics in terms of various occupations.
 - a. The student will determine the worker qualifications related to performing the basic tasks of various occupations.
 - b. The student will analyze his abilities and interests in terms of occupational areas he may wish to enter.
 - c. The student will analyze the working environment of various occupations and evaluate his attitudes toward these work environments.
- WW 4. The student will explore the economic incentives offered by various occupational areas.
 - a. The student will understand how wealth is accumulated through savings and investments and how it may influence his career and lifestyle.
- WW 5. The student will develop the basic mathematical skills necessary for employment in the career of his choice.
 - a. The student will identify and select the school subjects which contain the specific knowledge required for his tentative vocational choice.
 - b. The student will identify and evaluate his self-characteristics which will help him in terms of the occupation he thinks he may wish to pursue.

BEST COPY AVAILABLE

- Self 6. The student will recognize the implications of working with and without supervision, independently and with others.
 - a. The student will understand that decision making includes responsible action in identifying alternatives, selecting the alternative most consistent with his goals, and taking steps to implement the course of action.
 - b. The student will develop the skills required to identify the objectives of a task, specify resources required, outline procedures, perform operations and evaluate the product.
- Society 7. The student will analyze how societal needs create a demand for workers in various occupational areas.
 - The student will analyze the relationship between the benefits provided by society and the work performed by the members of the society.
 - b. The student will analyze decisions and choices made as a participant in either mathematical simulations or actual situations.
 - The student will research and demonstrate how man uses resources and mathematical technology creatively in his work.
 - d. The student will analyze how mathematical technology is used creatively to develop various products from natural resources.
 - e. The student will analyze the problems associated with the use of technology and research the proposed solutions to these problems.
